INNOVATION THROUGH CREATIVE DEVELOPMENT

A.A.G. STUCCHI introduces the new holders series 7100 for LED modules with PHJ65 and PHJ85 bases.

These LED modules are ideally suited for use in downlight applications where halogen lamps and CFLs are traditionally used.

The new holders are ingeniously designed so as to allow easy, positive insertion of the LED modules with only one moving part, the floating contacts and spring-rivet system ensures a positive contact to the TIM (Thermal Interface Material) to guarantee good air flow to provide effective heat dissipation.

Member of  Zhaga

A.A.G. STUCCHI is an active member of ZHAGA consortium since its foundation and on February 16th was elected to the steering committee. ZHAGA is a consortium of companies in the lighting field which aims to ensure standardization of LED Light Engines interfaces.

NEW Series 7100

Main features

Main features:

- reduced overall dimensions and “eye-catching” design;
- only one moving part;
- floating contacts;
- spring-rivet system;
- fixing with M3 standard screws;
- push-wire terminals with 2 holes;
- “made in Italy”.

7100/... (1100 lm)
7101/... (2000 lm)

LED modules PHJ65, PHJ85

Applications and Benefits

Applications

In downlight applications where halogen lamps and CFLs are traditionally used:

- hospitality and cruise ships in corridors, service areas, lobbies, lounges, restaurants;
- retail in corridors, changing rooms;
- healthcare in corridors, reception areas, waiting rooms.

Benefits

- easy to install and upgrade thanks to the integrated driver;
- round module allows miniaturization;
- improved “Total Cost of Ownership” (TCO);
- dimmable;
- saving up to 60% energy compared to the present halogen solutions;
- the average lifetime of 25,000 hours (with 70% of lumen) significantly reduces the need for maintenance.

Philips

Fortimo Twistable Integrated LLE's
(1100 lm, 2000 lm)

Samsung

Socketable Engine
(1100 lm)
